PROJECTS

HomeStay: Your Perfect Getaway Companion [🔗](#)

HomeStay is a web application that facilitates finding and booking homestays for vacations or travel stays. Users can explore homestay options, view details and photos of each listing, and securely book their stay. The platform also provides features for hosts to list their properties and manage bookings.

Features :

- **User Authentication:** Sign up, log in, and log out functionality.
- **Property Listings:** Display a list of properties with details, maps, and images.
- **User Interaction:** Allow users to create, edit, and delete listings, as well as create and delete reviews for properties.
- **Search and Filter:** Allow users to search for homestays based on location, price range, amenities, and other criteria.
- **Reviews and Ratings:** Allow users to leave reviews and ratings for homestays they have stayed at, helping future guests make informed decisions.

Tech Stack: HTML | CSS | JavaScript | BootStrap | Node.js | MongoDB | Express | Mongoose | EJS

Portfolio Website [🔗](#)

My Portfolio Website showcases my skills, projects, and experiences as a developer. It provides visitors with information about me, my work, and how to get in touch. The website highlights my abilities and presents a professional image to potential employers.

Features :

- **Home:** Welcome section with a brief introduction and overview.
- **About:** Detailed information about my background, skills, and interests.
- **Projects:** Showcase my projects with descriptions and links to live demos or GitHub repositories.
- **Contact:** Contact form and information for reaching out to me.
- **Resume:** Downloadable version of my resume or CV.
